

# Creating and Styling PPTX Slides with {rmarkdown}

R/Medicine 2021

Emil Hvitfeldt

2019-08-27

```
## [1] "theme.css"
```

You did something cool

And you want/need to show it to  
someone

and you want to do it using `rmarkdown`  
to increase reproducibility

You may use

- xaringan
- revealjs
- Beamer
- ioslides

these work well for presentation, but can be difficult to share and collaborate with with non-R users

PowerPoint is the Goliath of  
presentation software

# There are 3 main ways to create pptx from R

- using {rmarkdown} via pandoc
- using {officedown}
- using {officer}

# There are 3 main ways to create pptx from R

- using `{rmarkdown}` via pandoc
- using `{officedown}`
- using `{officer}`

# powerpoint\_presentation

This is a very simple slide setup

- Title Slide
- Title and Content (main content slide)
- Section Header
- Two Content

---

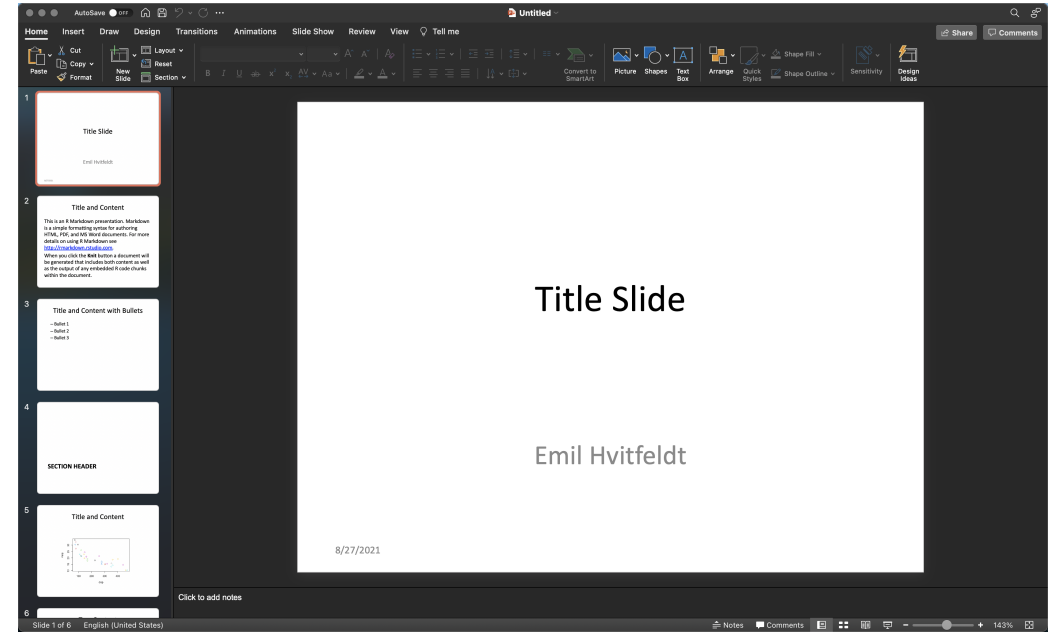

title: "Title Slide"

author: "Emil Hvitfeldt"

date: "8/27/2021"

output: powerpoint\_presentation

---

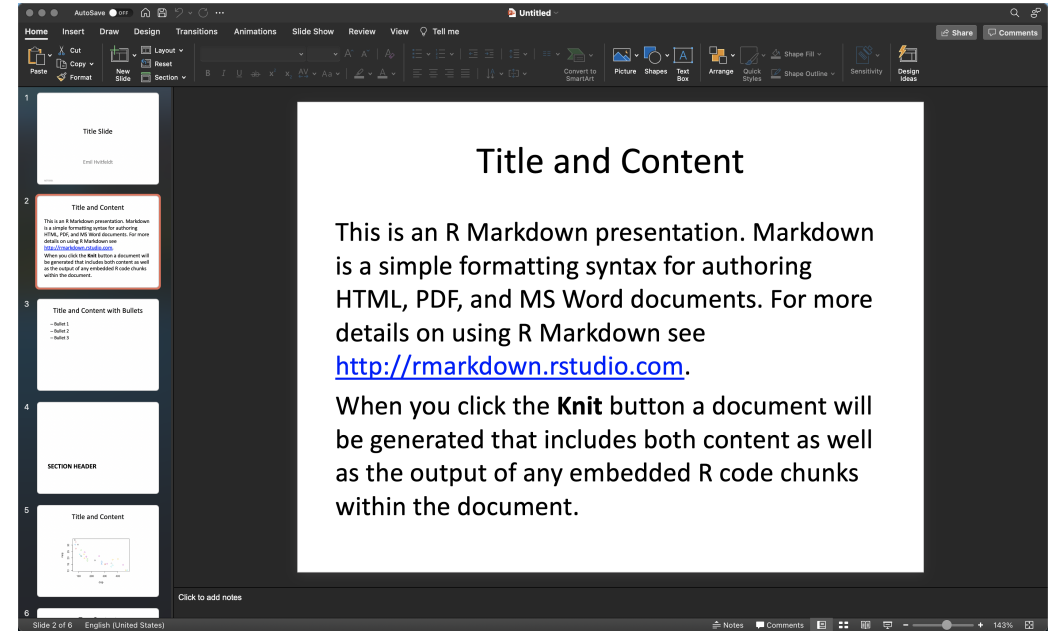

```
```\r setup, include=FALSE}
knitr::opts_chunk$set(echo = FALSE)
```
```

## ## Title and Content

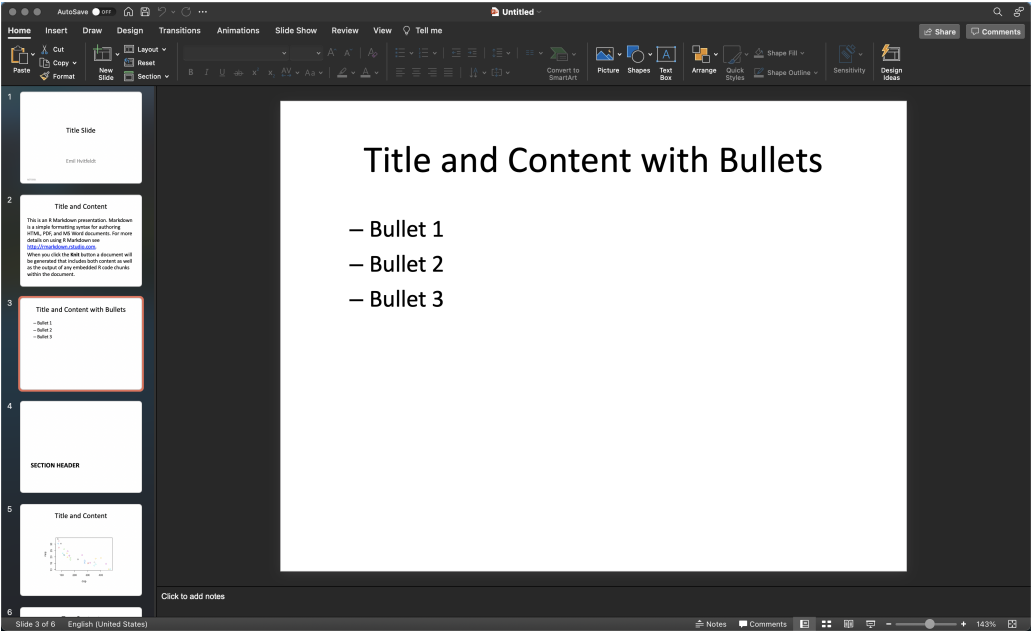

This is an R Markdown presentation. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document.

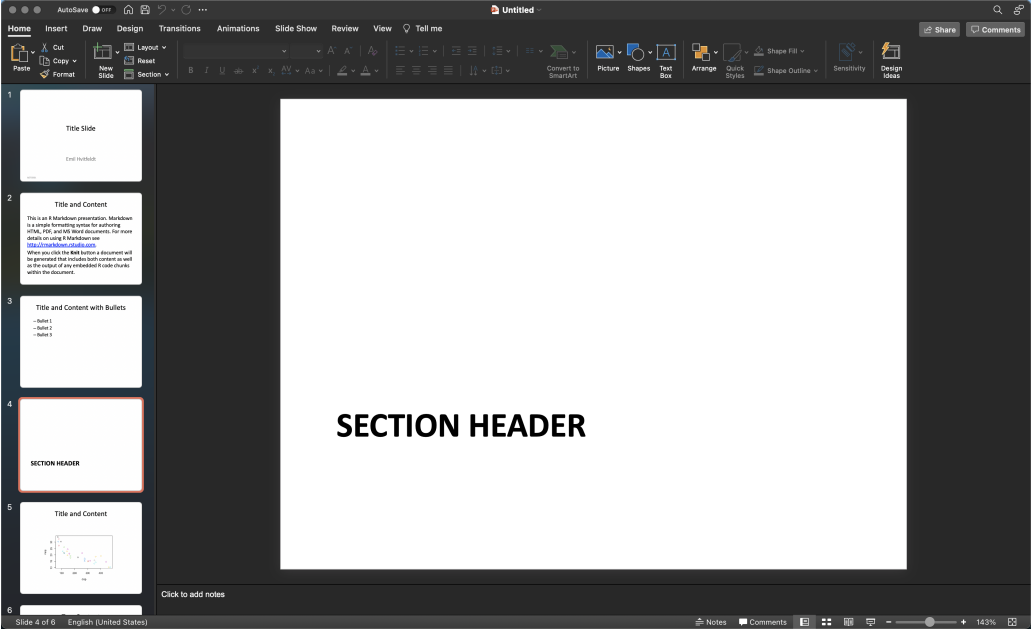

# ## Title and Content with Bullets

- Bullet 1
- Bullet 2
- Bullet 3

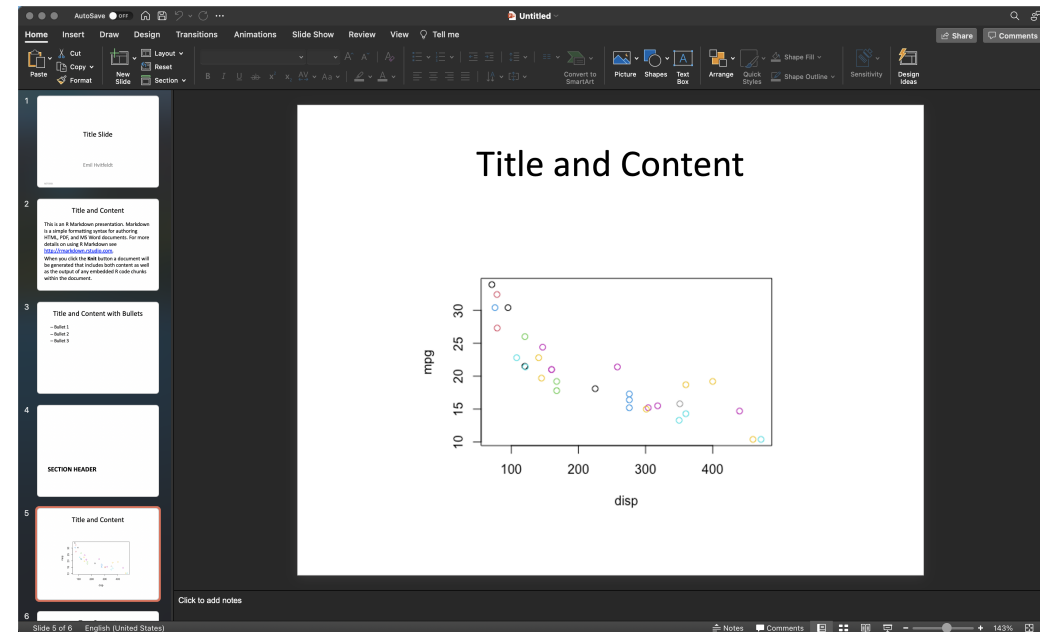

# # Section Header

## ## Title and Content

```
```{r}  
plot(mpg ~ disp, col = hp, data = mtcars)  
```
```

## ## Two Content

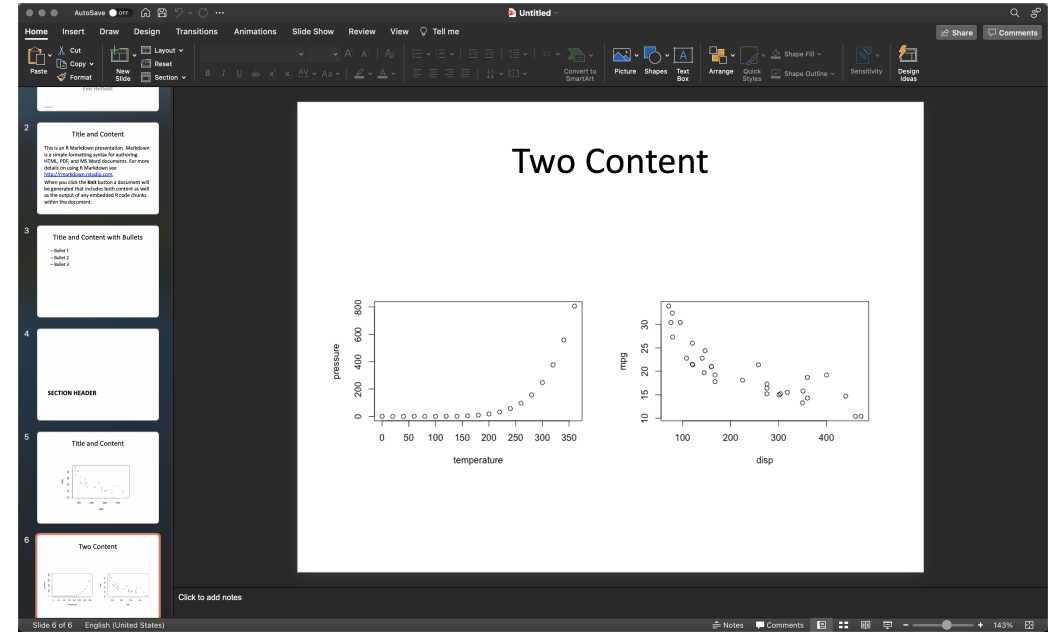

```
::::: {.columns}  
::: {.column}
```

```
```{r}  
plot(pressure)  
```
```

```
:::  
::: {.column}
```

```
```{r}  
plot(mpg ~ disp, data = mtcars)  
```
```

```
:::  
:::::
```

# pptxtemplates

```
# install.packages("devtools")  
devtools::install_github("EmilHvitfeldt/pptxtemplates")
```
